ZOHO Invoice

- This is a full-stack invoicing system built with a React dashboard and a Java Servlet backend to manage customers, inventory, and dynamic billing. It uses a MySQL relational database to process complex transactions and generate professional, print-ready invoices.

By

Srinivasan S

Completed:

- Login
- Items – CRUD operations
- Customers – CRUD operations
- Invoices -CRUD operations
- Invoice items
- Dashboard report
- View invoice

To Do

- GST billing
- Status of invoice
- Due date addition
- Organization update to user
- Getting receivables and unused credits
- Addition of payments
- Summary report of payments
